

GE HealthCare advancing enterprise imaging with cloud-enabled solutions

June 9, 2026

- GE HealthCare to showcase cloud-enabled solutions including Genesis Radiology Workspace and InteleShare at SIIM 2026
- Enterprise imaging solutions are designed to help improve workflow and productivity, enabling better patient care

CHICAGO--(BUSINESS WIRE)--Jun. 9, 2026-- GE HealthCare will showcase its latest enterprise imaging solutions at the Society for Imaging Informatics in Medicine (SIIM) 2026 Annual Meeting in Pittsburgh, PA.

Medical imaging departments today are under immense pressure from all sides including rising imaging volumes and increasing case complexity, while staffing shortages continue to grow. According to the American College of Radiology (ACR), radiologist workforce shortages have been identified as the biggest threat facing radiology for three consecutive years. This makes the ability to interpret studies from anywhere essential for maintaining throughput and ensuring timely diagnoses.¹

GE HealthCare continues to accelerate enterprise imaging solutions with Genesis™ Radiology Workspace². Genesis Radiology Workspace is a next-generation solution designed to transform radiology workflows, unify the user experience, and empower radiologists with great efficiency and precision. At the center of this innovation is View, FDA 510(k)-cleared, a powerful new viewer designed to be a fast diagnostic, zero-footprint viewer – streamlining radiology workflows with the intent to help enhance patient care while being fully accessible from any location. Genesis Radiology Workspace is designed to give radiologists the freedom to read from anywhere—without sacrificing speed or accuracy. Its high-performance visualization adapts to individual reading preferences and automatically displays the current and prior studies, helping to save time and reduce cognitive load. User-defined AI prioritization provides the capability to bring critical findings to the top to ensure there is visibility.

“The future of enterprise imaging depends on connected, cloud-enabled solutions that improve access, collaboration, and efficiency. GE HealthCare is committed to helping providers unify imaging workflows and unlock deeper clinical insights through cloud and AI-enabled innovation,” said Scott Miller, CEO, Solutions for Enterprise Imaging, GE HealthCare.

Intelrad, a GE HealthCare company, will also be demonstrating its cloud-first solutions including InteleShare™. InteleShare is a cloud-based medical image exchange platform designed to accelerate patient care through seamless, secure access to imaging across complex, multi-facility healthcare environments worldwide. With native EHR integration and automated workflows, InteleShare helps healthcare organizations reduce administrative burden, improve patient and clinician experiences, and make better use of their existing technology investments.
